JONEL CHICO

Senior Software Engineer I React, TypeScript & Full-Stack

Caloocan City, Philippines I jonelrocchico@gmail.com I jonelchico.vercel.app I linkedin.com/in/jonelchico I github.com/jonelchico-webdev

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years owning production React and TypeScript applications for distributed teams across the US and Australia, from high-traffic enterprise platforms serving millions of annual visits to performance-sensitive B2B SaaS. Production-engineering mindset: OpenTelemetry observability, Sentry error logging, stable legacy migrations, and unit, integration and end-to-end testing. Experienced with GraphQL, Apollo Client and shared component libraries. Backend depth in NestJS, PostgreSQL and Prisma, including ownership of a secure, multi-service EMR platform, for close collaboration with backend partners on API contracts and a correctness-first approach suited to payments.

KEY SKILLS

Frontend: React 18 (hooks, context, custom hooks), TypeScript, JavaScript, Next.js, Redux Toolkit, React Query
GraphQL & APIs: GraphQL, Apollo Client, REST APIs, API contract design with backend teams
UI Architecture: Component libraries, design systems, Storybook, Material UI, Tailwind CSS, performance tuning
Testing: Jest, Vitest, Cypress, Playwright (unit, integration and end-to-end)
Production & Observability: OpenTelemetry, Uptrace, Sentry, CI/CD, Docker, Git workflows and code review
Backend & AI: Node.js, NestJS, Fastify, PostgreSQL, Prisma, Firebase, Cloudflare R2, OpenAI API, Claude API

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Remote) — Casting.com I Aug 2024 – Present

- Lead frontend development of complex, performance-sensitive SaaS workflows in React and TypeScript, using Redux Toolkit and React Query to keep client and server state correct and predictable.
- Integrated OpenTelemetry with Uptrace across a NestJS/Fastify + Prisma backend, giving the team production telemetry to trace and debug user-facing issues.
- Modernised a legacy Material UI v4 application to modern React patterns while maintaining production stability for live customers.
- Designed reusable frontend architecture and coding standards that improved maintainability, consistency and developer onboarding.
- Built high-performance UIs including data tables, virtualised lists, infinite scrolling and drag-and-drop workflows.
- Integrated OpenAI and Claude APIs into product workflows, partnering with Product, Design and QA to ship customer-facing features.

Senior Frontend Developer (Remote) — Berlitz I Sept 2021 – Aug 2024

- Delivered enterprise-scale, high-traffic web platforms serving millions of annual site visits across global regions.
- Co-led a shared component library adopted across product teams serving multiple regional markets, standardising UI and speeding up feature delivery.
- Led migration of the frontend build pipeline from Gatsby to Astro, cutting production build times from 5–10 minutes to under 1 minute and shortening the CI/CD feedback loop.
- Authored unit and integration tests to improve release confidence.
- Mentored a team of 5 engineers through code reviews, technical discussions and React best practices.

Frontend Developer — White Cloak Technologies I Jul 2020 – Aug 2021

- Built reusable React components and shared UI libraries across multiple client projects, optimising performance and delivering production-ready features with design and backend teams.

Frontend Developer — Icefox Technology I Aug 2019 – Mar 2020

- Developed React features consuming GraphQL queries and mutations through Apollo Client; built reusable component systems and improved frontend performance.

NOTABLE PROJECT

KonsulTech — Backend Owner I Multi-clinic EMR platform for Philippine clinics (konsultech.app)

- Own the backend as one of two engineers: NestJS (Fastify), PostgreSQL and Prisma services for patients, SOAP consultations, appointments, prescriptions, lab results and doctor licence verification.
- Designed a three-service architecture: a Fastify API gateway as the single public entry point, the EMR backend, and a separate platform admin API, with internal routes blocked at the edge and service-to-service calls authenticated by short-lived, audience-bound tokens.
- Encrypted patient health data at field level with AES-256-GCM and enforced RBAC with per-facility data scoping, plus per-IP rate limiting and CSRF protection. Write-once consultation snapshots keep past records and printed prescriptions unchanged.
- Built HIPAA-aligned file uploads on Cloudflare R2 presigned URLs, keeping files off the API servers, and automated nightly PostgreSQL backups to R2 with GitHub Actions.
- Covered the services with 200+ end-to-end tests (Jest, Supertest) and an audit log of admin verification decisions.

EDUCATION

University of the East — B.S. Information Technology (Undergraduate) I Zuitt Coding Bootcamp (2019)
First Academy of Computer Arts — Visual Graphic Design (2018) I CIIT College — Web Design Specialist (2016)
